

PROJECT QUANT — TRADING SYSTEM MEMORY

T-Series | V4 Model Analysis, V5 Design, Strategy Architecture + Data Architecture
Arpit Goel + Claude | May 14–20, 2026

CORE MISSION

Build India's institutional-grade trading signal system for retail investors. Convert 12 battle-tested Google Sheet models into a production Python platform — validated, systematic, and deployable at scale.
Immediate goal: validate signals via Rs.20K dabba sandbox, then deploy Rs.2.5 Crore in real capital.

V4 FUTURE MODEL — OVERVIEW

Parameter	Detail
Capital	Rs.60 Lakhs (client money). Max 20 trades (Long 12 + Short 4 + buffer)
SL / Target	-2.5% +2.8% Expiry: 26MAY Futures
Market Score	17.5 / 20 = Bullish
Strategy 1	Buy Reversal 50 DMA — Long 12 slots — 44% accuracy — -Rs.2.82L
Strategy 2	Sell RSI — Short 4 slots — 58.9% accuracy — +Rs.5.98L
Overall CAGR	6.52% 56 days 367 trades

V5 SIGNAL MODEL — NEW DESIGN

Core change: V4 uses OR-style voting. V5 uses AND-gate logic — all conditions must be true simultaneously before signal fires.

Buy_Claude_V5 — 12 Filters

Filter	Condition	Column
Month Index	0 to 50	C
Sector Week	-5% to 0%	D
Sector Day	-2% to 0%	E
200 DMA Range	-25% to 0%	F
50 DMA Range	-15% to 0%	G
RSI Month	20 to 55	H
RSI Weekly	15 to 50	I
Month Return	-15% to 0%	J
Week Return	-4% to 0%	K
52 Week Index	0 to 55	L
1D Range	-2% to 0%	M
Finkhoz Rating	N/A (removed for Sell)	—

Final signal column: X (col 24). Signals start row 9.

Sell_Claude_V5 — 11 Filters

Same as Buy but Finkhoz Rating removed. Final signal column: V (col 22).

MARKET GATE — ARCHITECTURE

Gate Condition	Result	Buy Slots	Sell Slots
All 4 pass	OPEN	8	2
1 failing	PARTIAL	6	4
2 failing	PARTIAL	4	6
3+ failing	CLOSED	2	8
4 failing	CLOSED	2	8

Gate Inputs: ADR > 1 | Nifty Day > 0 | Nifty Week > 0 | Nifty Month > 0

DUAL ENGINE LOGIC — LOCKED

Engine	Logic
LONG Entry	CMP between PP and R1 (pivot filter)
LONG Target	Gate 0-2 failing → R2 (aggressive) Gate 3+ → R1 (conservative)
LONG Gate Exit	Gate declines to 3+ AND CMP > R1 → exit
SHORT Entry	CMP between PP and S1 (pivot filter)
SHORT Target	Gate 0-2 failing → S1 (conservative) Gate 3+ → S2 (aggressive)
SHORT Gate Exit	Gate improves to 0-2 AND CMP < S1 → exit
Dynamic SL	LONG: SL = CMP - (Target - CMP) SHORT: SL = CMP + (CMP - Target)
Priority	Target Hit always takes priority over SL Hit

V5 PYTHON DATA ARCHITECTURE — DECIDED (Week 2 after GVM PostgreSQL)

Decision made May 20, 2026: Replace sheet formula calculations with Python + FastAPI data layer. Sheet becomes display only — no formulas, no bugs.

Data Source	Provides	Status
Yahoo Finance	All DMA (9/20/50/100/200), DMA Range%, RSI D/W/M, ATR, BB, Pivots	Build Week 2 post-GVM
GVM Engine (127 segments)	Sector Day%/Week%/Month%/Year%, Segment Day%, Month Index — calculate DMA averages for all stocks in same GVM	Build Week 2 post-GVM
INFIN / Live Feed	Live CMP only (intraday) — Yahoo has 15-min delay	Keep as-is
FastAPI	Serves all calculated data to sheet + V5 engine	Build Week 2 post-GVM

Why GVM for Sector Data:

Reason	Detail
More granular	127 GVM segments vs NSE's ~20 sectors — better peer comparison
No external dependency	No NSE API, no third-party sector feed
Already validated	Peer groups built and tested in GVM model
Single source of truth	GVM PostgreSQL → V5 Python — everything connected

Cannot Calculate Without Live Feed:

Data Point	Reason
Live CMP	Yahoo has 15-min delay — keep INFIN for intraday
1D Range (intraday)	Needs live CMP vs day open

DATA QUALITY — KNOWN ISSUE

Stock	Parameter	Sheet Value	Correct Value	Root Cause
POWERINDIA	200 DMA Range	-11.4%	+18.0%	Formula bug in Futures Data sheet row

Risk: Similar formula bugs may exist for other stocks in the 214-stock universe. Python data layer (Week 2 post-GVM) eliminates this risk permanently.

V5 PYTHON BUILD PLAN — REVISED

Sprint	Timeline	Deliverable
Sheet Validation Script	Post T5 session	Python script: reads Futures Data via gspread, pulls Yahoo, flags mismatches >2% f
Data Layer (Sprint 1)	Week 2 after GVM PostgreSQL live	Yahoo → all technical indicators. GVM segments → sector data. FastAPI serves to s
Signal Engine (Sprint 2)	Month 3	Both strategies in Python, validated vs V4 historical, auto Trade Control, dynamic Lo
Admin Panel (Sprint 3)	Month 4	React + FastAPI, multiple model versions, filter sliders with backtesting
Live Deploy (Sprint 4)	Month 4	Fyers signals, real-time P&L, Telegram/WhatsApp, Rs.2.5Cr ready

V5 SHEET INFRASTRUCTURE

Tab	Purpose	Status
Futures Data	214 stocks, NIFTY first row, live CMP via INFIN_Live	Live
V5 Rules Preference	Gate logic, Buy/Sell filter specs, slot allocation	Live
Buy_Claude_V5	12-filter AND-gate funnel, final signals col X row 9+	Live
Sell_Claude_V5	11-filter AND-gate funnel, final signals col V row 9+	Live
V5 In Position	Live open trades — auto-populated by engine	Live
V5 Trade Log	Full closed trade history	Live
V5 Dashboard	Live gate status, slots, P&L summary	Live
V5 Performance Summary	Long vs Short stats — script-generated	Live

Sheet ID: 1USeJXlq5azUr1jK70FPO63C-shtDBD43cFrzsq8SRCU

OPEN POSITIONS — MAY 20, 2026

Direction	Stock	Entry	Strategy	Status
LONG	GRASIM	2958.9	Buy Reversal V5	Open — Loss
LONG	APOLLOHOSP	8085.5	Buy Reversal V5	Open — Loss
LONG	360ONE	1111.0	Buy Reversal V5	Open — Loss
SHORT	RVNL	276.8	Sell RSI V5	Open — Win
SHORT	SHREECEM	24400.0	Sell RSI V5	Open
SHORT	MARUTI	12953.0	Sell RSI V5	Open — Win
SHORT	DALBHARAT	1712.6	Sell RSI V5	Open — Win

Net Unrealised: -Rs.10,904 | Longs: -Rs.21,100 | Shorts: +Rs.10,196 | Shorts carrying the book.

PENDING ITEMS

Item	Detail	Priority
POWERINDIA fix	Fix 200 DMA Range formula in Futures Data sheet	High
Validation script	Python: cross-check all 214 stocks sheet vs Yahoo — flag mismatches >2%	High
Telegram activation	Add bot token + chat ID, set TELEGRAM_ACTIVE=true	Month 2

F&O ban check	Keep Lot Sizes tab OR script fetches NSE CSV daily	Month 2
Cooldown/gap protection	Add gap open filter and re-entry cooldown	Month 2
Lot multiplier	1x/2x/3x manual selection at trade punch	Month 2
V5 Data Layer	Yahoo + GVM segments → FastAPI — build after GVM PostgreSQL live	Week 2 post-GVM
V5 Python Sprint 1	Signal engine in Python — start after GVM live	Month 3

T Memory — Trading System | Updated May 20, 2026

T = Trading System. V4 analysis, V5 design, data architecture, Apps Script engine, build strategy.
