

PROJECT QUANT — TRADING SYSTEM MEMORY

T-Series v2 | V5 Engine Deployed | 4-Strategy Architecture
Arpit Goel + Claude | Updated May 20, 2026

CORE MISSION

Build India's institutional-grade trading signal system for retail investors. Convert 12 battle-tested Google Sheet models into a production Python platform — validated, systematic, and deployable at scale.

Immediate goal: validate signals via Rs.20K dabba sandbox, then deploy Rs.2.5 Crore in real capital.

V4 FUTURE MODEL — HISTORICAL REFERENCE

Parameter	Detail
Capital	Rs.60 Lakhs (client money). Max 20 trades
SL / Target	-2.5% +2.8% Expiry: 26MAY Futures
Strategy 1	Buy Reversal 50 DMA — 44% accuracy — -Rs.2.82L
Strategy 2	Sell RSI — 58.9% accuracy — +Rs.5.98L
Overall	CAGR 6.52% 56 days 367 trades OR-style voting
Verdict	Replaced by V5 — AND-gate logic for higher precision

V5 ENGINE v2 — DEPLOYED MAY 20, 2026

Status: LIVE. Two triggers active — **runV5Engine** every 1 min (signal scan + exit monitor) and **buildAllDisplays** every 5 min (UI refresh). Engine respects market hours (9:15 AM–3:30 PM IST), holidays, and weekends.

4-Strategy Architecture

Strategy	Direction	Signal Sheet	Signal Col
Buy Reversal V5	LONG	Buy_Reversal_V5	X (col 24)
Buy Momentum V5	LONG	Buy_Momentum_V5	X (col 24)
Sell Reversal V5	SHORT	Sell_Reversal_V5	V (col 22)
Sell Momentum V5	SHORT	Sell_Momentum_V5	V (col 22)

All 4 funnels use AND-gate logic — every filter must be true simultaneously for signal to fire. Signals start row 9. Dedup rule: if a stock appears in both Reversal and Momentum, Momentum wins.

MARKET GATE — UPDATED SLOT FORMULA

Gate Inputs: ADR > 1 | Nifty Day > 0 | Nifty Week > 0 | Nifty Month > 0

Fail Count	Buy Slots	Sell Slots	Mode
0 fails	10	2	Full Bullish
1 fail	8	4	Bullish Lean
2 fails	5	10	Partial — Mixed
3+ fails	2	10	Defensive — Short Heavy

Slot derivation in code: **buy >= 10 → 0 fails | buy >= 8 → 1 fail | buy >= 5 → 2 fails | else → 3+ fails.** Max positions cap: 15.

DUAL ENGINE LOGIC — LOCKED

Engine	Logic
LONG Entry	CMP between PP and R1 (pivot filter)
LONG Target	Gate 0-2 fails = R2 (aggressive) Gate 3+ = R1 (conservative)
LONG Gate Exit	Gate declines to 3+ AND CMP > R1 = exit
SHORT Entry	CMP between PP and S1 (pivot filter)
SHORT Target	Gate 0-2 fails = S1 (conservative) Gate 3+ = S2 (aggressive)
SHORT Gate Exit	Gate improves to 0-2 AND CMP < S1 = exit
Dynamic SL	LONG: SL = CMP - (Target - CMP) SHORT: SL = CMP + (CMP - Target)
Priority	Target Hit always takes priority over SL Hit

INTENTIONAL DESIGN CHOICES — LOCKED

Choice	Why
Gap window 9:20–9:25 AM	Skip first 5 min volatility. Open-print noise filtered out.
No re-entry same day after SL	Prevents revenge trading. One shot per stock per day.
Rule #1: Entry after 3 PM only	BTST positional logic. Avoid intraday noise.
AND-gate over OR-style	Fewer signals, higher conviction. Quality > quantity.

V5 SHEET INFRASTRUCTURE

Tab	Purpose	Status
Futures Data	215 stocks, NIFTY first row, live CMP feed	Live
V5 Rules Preference	Gate logic, slot allocation (B8/E8/G8)	Live
Buy_Reversal_V5	12-filter AND-gate funnel — LONG reversal	Live
Buy_Momentum_V5	AND-gate funnel — LONG momentum	Live
Sell_Reversal_V5	11-filter AND-gate funnel — SHORT reversal	Live
Sell_Momentum_V5	AND-gate funnel — SHORT momentum	Live
V5 In Position	Display rows 1-70 Raw data row 72+	Live
V5 Trade Log	Display rows 1-70 Raw data row 72+	Live
V5 Performance Summary	Strategy + Direction breakdown — auto-built	Live

Sheet ID: 1USeJXlq5azUr1jK70FPO63C-shtDBD43cFrszq8SRCU

DISPLAY ARCHITECTURE — DUAL ZONE

Zone	Rows	Purpose
Display Zone	Rows 1–70	Strategy boxes, summaries, gate status — rebuilt every 5 min
Header Row	Row 71	Column headers (Entry Time, Direction, Stock, etc.)
Raw Data Zone	Row 72+	Engine writes trade rows here — never touched by display script

Trade Log column 15 = Strategy — every closed trade tagged with originating strategy name for per-strategy P&L tracking.

OPEN POSITIONS — SNAPSHOT MAY 20, 2026 (END OF DAY)

Per **testRun()** output 6:39 PM: Gate fail count 2 | Buy slots 5 | Sell slots 10 | Open Long 3 | Open Short 7 | Total Open 10/15 | Available Long 2 | Available Short 3.

Signal scan at EOD: Buy Reversal: 0 | Buy Momentum: 1 | Sell Reversal: 0 | Sell Momentum: 0. 1 signal across 215 stocks — expected behaviour for AND-gate funnels.

DATA SOURCE RULE — NON-NEGOTIABLE

Yahoo Finance = ALL price data. Historical daily AND near-live quotes (15 min delay). No token. No auth. Free forever.

Fyers = PERMANENTLY DELETED. Never reinstall. Never reference. All files deleted May 20.

MCP = DROPPED. Railway FastAPI replaces MCP. Works from browser, mobile, laptop — anywhere.

TELEGRAM ALERTS

Item	Status
Bot Token	Hardcoded in CONFIG
Chat ID	Set: -1003689715883
TELEGRAM_ACTIVE	false (deferred to Month 2)
Entry alerts	Coded — fire when active
Exit alerts	Coded — fire when active

PENDING ITEMS

Item	Detail	Priority
POWERINDIA fix	Fix 200 DMA Range formula in Futures Data	High
Validation script	Python: 215 stocks sheet vs Yahoo crosscheck	High
V5 Data Layer	Yahoo + GVM segments via FastAPI on Railway	Week 2 post-GVM
V5 Python Sprint 1	Port signal engine to Python	Month 3
Telegram activation	Set TELEGRAM_ACTIVE = true	Month 2

V5 PYTHON DATA ARCHITECTURE — DECIDED

Decision locked May 20, 2026: Replace sheet formula calculations with Python + FastAPI data layer on Railway. Sheet becomes display only — no formulas, no bugs. No MCP. No Desktop. Railway is the brain.

Data Source	Provides	Status
Yahoo Finance	DMA 9/20/50/100/200, RSI D/W/M, ATR, BB, Pivots, 52W	Build Week 2 post-GVM
GVM Engine (127 segments)	Sector Day/Week/Month/Year %, Segment Day %	After GVM PostgreSQL live
Yahoo Quote (15 min)	Near-live CMP — no token, no auth, always works	Live now
FastAPI on Railway	Serves all calculated data via REST endpoints	Build Week 2 post-GVM

T Memory v2 — Trading System | Updated May 20, 2026

T = Trading System. V5 Engine v2 deployed. 4-strategy architecture, dual-zone displays, auto-refresh triggers live.
